

Belimo IoT Principles

1. Belimo's business is that of a Device Manufacturer.
2. Data captured by Belimo devices is valuable. Making that data easily accessible is the primary focus of Belimo's IoT strategy.
3. Belimo embraces an aggressively open policy toward data access and supports the widespread adaptation of open data protocols where applicable.
4. Applications developed by Belimo are focused on those which serve to simplify planning, device commissioning and maintenance, making System Integrators and OEMs more effective and efficient such that they can provide a unique offering to their customers.
5. Connectivity of Belimo devices embrace a variety of industry accepted methods, both wired and wireless.
6. New Belimo IoT devices connect to the cloud and data generated by them are accessible through the Belimo API.
7. Access to the Belimo API is provided free of charge to any business entity authorized by the end user who owns a connected Belimo device.
8. Belimo is committed to establishing itself as the leader in cloud connected field devices despite the fact that the timing of widespread IoT adoption is difficult to predict.
