

Potable water valve, 2-way, Press fit

- For potable water applications
- NSF/ANSI 372 – Lead Free
- NSF/ANSI 61 – CLD 23 – Water Quality

5-year warranty

| Suitable actuators | Non Fail-Safe                  | LRB(X)                                             |
|                    | Spring                         | LF                                                 |

## Safety notes

- The ball valve has to be exercised at least once a week, so that the quality of potable water as well as the functionality are not affected.
- The valve has been designed for use in stationary potable water systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- The valve does not contain any parts that can be replaced or repaired by the user.

## Product features

|                |                                                                                                                                                                             |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Operating mode | The on/off ball valve is adjusted by a rotary actuator. The rotary actuator is controlled by an on/off signal. Open the ball valve counterclockwise and close it clockwise. |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Installation notes

**Notes** The ball valve is a regulating device. To fulfil this control task in the long term, the circuit must be kept free from particle debris (e.g. welding beads during installation work).

**Permissible installation orientation** The ball valve can be installed upright to horizontal. The ball valve may not be installed in a hanging position, i.e. with the stem pointing downwards.

**Servicing** Ball valves and rotary actuators are maintenance-free.

Before any service work on the control element is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level).

The system must not be returned to service until the ball valve and the rotary actuator have been correctly reassembled in accordance with the instructions and the pipeline has been refilled by professionally trained personnel.

**Flow direction** Please also ensure that the ball is in the correct position (marking on the shaft).

## Electrical installation

☒ **INSTALLATION NOTES**

- Ⓐ Actuators with appliance cables are numbered.
- ▲ Provide overload protection and disconnect as required.
- ▲ Actuators may also be powered by DC 24 V.
- ▲ Actuators Hot wire must be connected to the control board common. Only connect common to neg. (-) leg of control circuits. Terminal models (-T) have no-feedback.
- ▲ Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed.
- ▲ One built-in auxiliary switch (1x SPDT), for end position indication, interlock control, fan startup, etc.
- ⚠ Apply only AC line voltage or only UL-Class 2 voltage to the terminals of auxiliary switches. Mixed or combined operation of line voltage/safety extra low voltage is not allowed.
- ◆ Meets cULus requirements without the need of an electrical ground connection.

⚠ **Warning! Live electrical components!**

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.
