Electrical installation

 **INSTALLATION NOTES**

-  **A** Actuators with appliance cables are numbered.
-  **1** Provide overload protection and disconnect as required.
-  **2** Actuators may be connected in parallel. Power consumption and input impedance must be observed.
-  **3** Apply only AC line voltage or only UL-Class 2 voltage to the terminals of auxiliary switches. Mixed or combined operation of line voltage/safety extra low voltage is not allowed.
-  **4** Actuators may also be powered by DC 24 V.
-  **5** Two built-in auxiliary switches (2x SPDT), for end position indication, interlock control, fan startup, etc.
-  **6** Only connect common to negative (-) leg of control circuits.
-  **7** A 500 Ω resistor (ZG-R01) converts the 4...20 mA control signal to 2...10 V.
-  **8** Control signal may be pulsed from either the Hot (Source) or Common (Sink) 24 V line.
-  **9** For triac sink the Common connection from the actuator must be connected to the Hot connection of the controller. Position feedback cannot be used with a triac sink controller; the actuator internal common reference is not compatible.
-  **10** Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed.
-  **11** IN4004 or IN4007 diode. (IN4007 supplied, Belimo part number 40155).
-  **12** Meets cULus requirements without the need of an electrical ground connection.
-  **13** Actuators are provided with color coded wires. Wire numbers are provided for reference.
-  **14** **Warning! Live electrical components!**
During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.
