Electrical installation

> INSTALLATION NOTES

Meets cULus requirements without the need of an electrical ground connection.

1 Provide overload protection and disconnect as required.

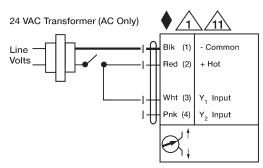

Actuators may be connected in parallel. Power consumption and input impedance must be observed. Control signal may be pulsed from either the Hot (Source) or Common (Sink) 24 V line.

Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed.

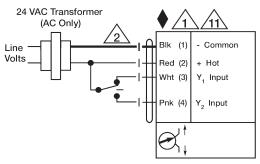

Actuators with plenum cable do not have numbers; use color codes instead.

Warning! Live Electrical Components!

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.
