

Globe valve actuator with fail-safe for 2-way and 3-way globe valves

- Actuating force 2000 N
- Nominal voltage AC 24 V
- Control 3-point
- Stroke 32 mm

Picture may differ from product

Technical data

Electrical data	Nominal voltage	AC 24 V
	Nominal voltage frequency	50/60 Hz
	Nominal voltage range	AC 19.2...28.8 V
	Power consumption in operation	4.5 W
	Power consumption in rest position	2 W
	Power consumption for wire sizing	9 VA
	Connection supply / control	Terminals 4 mm ² (cable ø4...10 mm)
	Parallel operation	Yes (note the performance data)
Functional data	Actuating force motor	2000 N
	Setting fail-safe position	Stem retracted / extended, adjustable (POP rotary knob)
	Bridging time (PF)	2 s
	Manual override	with push-button
	Stroke	32 mm
	Running time motor	150 s / 32 mm
	Running time fail-safe	35 s / 32 mm
	Sound power level, motor	60 dB(A)
	Sound power level, fail-safe	60 dB(A)
	Position indication	Mechanical, 5...32 mm stroke
Safety data	Protection class IEC/EN	III, Safety Extra-Low Voltage (SELV)
	Power source UL	Class 2 Supply
	Degree of protection IEC/EN	IP54
	Degree of protection NEMA/UL	NEMA 2
	Housing	UL Enclosure Type 2
	EMC	CE according to 2014/30/EU
	Certification IEC/EN	IEC/EN 60730-1 and IEC/EN 60730-2-14
	UL Approval	cULus according to UL60730-1A, UL60730-2-14 and CAN/CSA E60730-1 The UL marking on the actuator depends on the production site, the device is UL-compliant in any case
	Type of action	Type 1.AA
	Rated impulse voltage supply / control	0.8 kV
	Pollution degree	3
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	0...50°C [32...122°F]
	Storage temperature	-40...80°C [-40...176°F]
	Servicing	maintenance-free

Technical data

Weight	Weight	6.4 kg
Terms	Abbreviations	POP = Power off position / fail-safe position CPO = Controlled power off / controlled fail-safe PF = Power fail delay time / bridging time

Safety notes

- This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.
- The switch for changing the direction of motion and so the closing point may be adjusted only by authorised specialists. The direction of motion is critical, particularly in connection with frost protection circuits.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Operating mode The actuator moves the valve to the desired operating position at the same time as the integrated capacitors are loaded. Interrupting the supply voltage causes the valve to be moved to the selected fail-safe position by means of stored electrical energy.

Pre-charging time (start up) The capacitor actuators require a pre-charging time. This time is used for charging the capacitors up to a usable voltage level. This ensures that, in the event of a power failure, the actuator can move at any time from its current position into the preset fail-safe position. The duration of the pre-charging time depends mainly on how long the power was interrupted.

Typical pre-charging time

[d] = Power failure in days
[s] = Pre-charging time in seconds

Delivery condition (capacitors) The actuator is completely discharged after delivery from the factory, which is why the actuator requires approximately 20 s pre-charging time before initial commissioning in order to bring the capacitors up to the required voltage level.

Product features

Setting fail-safe position (POP)	The rotary knob fail-safe position can be used to adjust the desired fail-safe position. The adjustment range always refers to the maximum height of stroke of the actuator. In the event of a power failure, the actuator will move to the selected fail-safe position, taking into account the bridging time (PF) of 2 s set at the factory.
Mounting on third-party valves	The RetroFIT+ actuators for installation on a wide range of valves from various manufacturers are comprised of an actuator, universal valve neck adapter and universal valve stem adapter. Adapt the valve neck and valve stem to begin with, then attach the RetroFIT+ actuator to the valve neck adapter, connect to the valve and start up. The valve neck adapter/actuator can be rotated by 360° on the valve neck, provided the size of the installed valve permits.
Mounting on Belimo valves	Use standard actuators from Belimo for mounting on Belimo globe valves.
Manual override	Manual control with push-button possible - temporary. The gear train is disengaged and the actuator decoupled for as long as the button is pressed. The stroke can be adjusted by using a hexagon socket screw key (5 mm), which is inserted into the top of the actuator. The stem extends when the key is rotated clockwise.
High functional reliability	The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.
Position indication	The stroke is indicated mechanically on the bracket with tabs. The stroke range adjusts itself automatically during operation.
Home position	Factory setting: Actuator stem is retracted.
Setting direction of motion	When actuated, the direction-of-stroke switch changes the direction of motion in normal operation. The direction-of-stroke switch has no influence on the fail-safe position that has been set.
Restriction 3-point controller	It must be ensured that the pulsating 3-point controller stops when the end position is reached. This can be ensured through an additional auxiliary switch (S2A-H). If this is not possible on the system side, the multifunctional 24 V version of the actuator (..V24A-MP-..) must be used. This actuator must be configured as a 3-point control via Belimo Assistant 2 with the LINK.10

Accessories

Electrical accessories	Description	Type
	Auxiliary switch 2x SPDT add-on	S2A-H
Mechanical accessories	Description	Type
	Spacer ring for Sauter, stroke 50 mm	ZRV-301
	Spacer ring for Siebe, stroke 50 mm	ZRV-302
	Spacer ring for Johnson Control, stroke 50 mm	ZRV-303
	Washer Sauter for Sauter, stroke 50 mm	ZRV-304

Electrical installation

Supply from isolating transformer.

Parallel connection of other actuators possible. Observe the performance data.

Direction of stroke switch factory setting: Actuator stem retracted (▲).

AC 24 V, 3-point

1	2	3	4	Stroke direction	Stroke direction
