

Outdoor sensor with weather shield Humidity / Temperature

Active sensor (4...20 mA) for measuring the relative or absolute humidity and temperature in outdoor areas. Instead of the humidity signal, the enthalpy or the dewpoint can be selected as an output signal. NEMA 4X / IP65 rated housing.

Туре	Output signal active temperature	Output signal active humidity	
22UTH-53	420 mA	420 mA	
Technical data			
Electrical Data	Nominal voltage	DC 24 V	
	Nominal voltage range	DC 13.526.4 V	
	Power consumption DC	1 W	
	Electrical connection	Pluggable spring-loaded terminal block max. 2.5 mm²	
	Cable entry	Cable gland with strain relief ø68 mm (1/2" NPT conduit adapter included)	
Functional Data	Medium	Air	
	Multirange	4 measuring ranges selectable	
	Current output	$2x$ 420 mA, max. resistance 500 Ω	
Measuring Data	Measured values	relative humidity Absolute humidity Dew point Enthalpies Temperature	
Specification temperature active	Sensing element technology	Polymer-based capacitive sensor with stainless steel wire mesh filter	
	Measuring range temperature settings	Active sensor: range selectable Attention: The maximum measuring range listed does not indicate the allowable fluid temperature for the sensor. Refer to safety data for the maximum fluid temperature limits. Setting Range [°C] Range [°F] Factory setting S0 -4060 -40160 S1 050 40140 S2 -1535 0100 S3 -2080 0200	
	Accuracy temperature	±0.3°C @ 25°C [±0.5°F @ 77°F]	
	Long-term stability	±0.09°F p.a. @ 70°F [±0.05°C p.a. @ 21°C]	
	Time constant τ (63%) in the room	Typical 351 s @ 0 m/s	
Specification Humidity	Sensing element technology	Polymer-based capacitive sensor with stainless steel wire mesh filter	
	Measuring range	0100% RH non-condensing

Safety Notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application. Unauthorized modifications are prohibited. The product must not be used in relation with any equipment that in case of a failure may threaten humans, animals or assets.

Ensure all power is disconnected before installing. Do not connect to live/operating equipment.

Only authorized specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Remarks

General Remarks Concerning Sensors

When using lengthy connection wires (depending on the cross section used) the measuring result might be falsified due to a voltage drop at the common GND-wire (caused by the voltage current and the line resistance). In this case, 2 GND-wires must be wired to the sensor - one for supply voltage and one for the measuring current.

Sensing devices with a transducer should always be operated in the middle of the measuring range to avoid deviations at the measuring end points. The ambient temperature of transducer electronics should be kept constant. The transducers must be operated at a constant supply voltage (±0.2 V). When switching the supply voltage on/off, onsite power surges must be avoided.

Remark: Occurring draft leads to a better carrying-off of dissipative power at the sensor. Thus temporally limited fluctuations might occur upon temperature measurement.

Build-up of self-heating by electrical dissipative power

Temperature sensors with electronic components always have a dissipative power which affects the temperature measurement of the ambient air. The dissipation in active temperature sensors shows a linear increase with rising operating voltage. The dissipative power should be taken into account when measuring temperature.

In case of a fixed operating voltage (± 0.2 V), this is normally done by adding or reducing a constant offset value. As Belimo transducers work with a variable operating voltage, for reasons of production engineering only one operating voltage can be taken into consideration. Transducers 0...10 V / 4...20 mA have a standard setting at an operating voltage of DC 24 V. This means that at this voltage, the expected measuring error of the output signal will be the least. For other operating voltages, the offset error will be increased by a changing power loss of the sensor electronics.

If a readjustment directly at the active sensor should be necessary during later operation, this can be done with the following adjustment methods.

- For sensors with NFC or dongle with the corresponding Belimo app
- For sensors with a trimming potentiometer on the sensor board
- For bus sensors via bus interface with a corresponding software variable

Application notice for humidity sensors

The humidity sensor is extremely sensitive. Touching the sensor element or exposing it to aggressive substances like chlorine, ozone, ammonia, hydrogen peroxide or ethanol (i.e. as a cleaning agent) may affect the measurement accuracy.

Long term operation outside the recommended conditions (5...60°C and 20...80% RH) can result in a temporary offset. After returning into the recommended range, this effect disappears.

Parts included

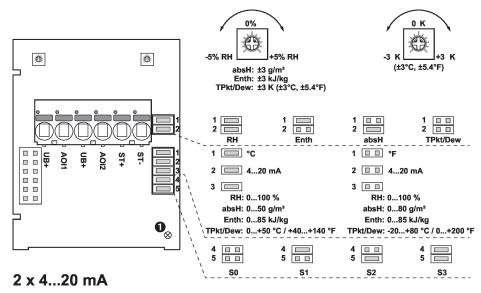

Description	Туре
Mounting plate L housing	A-22D-A10
Rain cover, for 22UTH	A-22U-A01
Dowels Screws	
1/2" NPT conduit adapter
